

Oleksii Grygorchuk

Senior Software Engineer

Würzburg, Germany

alekseymanhbm@gmail.com

GMT+1 / GMT+2 (CET/CEST)

SUMMARY

Senior full-stack engineer (7+ years) with deep TypeScript/Node.js and React expertise, proven end-to-end ownership of a national-scale production system for 3.5+ years, and a disciplined AI-assisted development process built around Claude Code: plan before multi-file changes, execute autonomously against an approved plan, and never call anything “done” without a concrete verification step — never trust an agent’s self-report. Actively extending that discipline into Python/FastAPI and LangGraph/RAG agent systems through hands-on pet projects, on top of a strong Node.js/TypeScript backend foundation that transfers directly.

SKILLS

Frontend	React, TypeScript, Angular, Vue.js, JavaScript, HTML5, CSS3
Backend	Node.js, PHP, Symfony, C#, Python/FastAPI (working knowledge)
Data	PostgreSQL, MySQL, MongoDB, TypeORM
AI engineering	Claude Code, Cursor, LangGraph & RAG/vector DB (pet-project level)
DevOps	Docker, Git, CI/CD
Practice	Spec-driven development, plan-then-execute, verification-before-“done”, mentoring

AI-ASSISTED DEVELOPMENT PROCESS

- Multi-file or risky changes go through a plan step first; execution then runs autonomously against the approved plan, not per-action confirmation.
- Hard rule: nothing is reported complete without naming the concrete check that proves it — a test run, a diff, a log line.
- Persistent, file-based memory across sessions so context and decisions survive between work sessions.
- Actively guards against AI confidently claiming unverified success and quiet scope creep — caught by verification, not by trusting the agent's report.

EMPLOYMENT HISTORY

Software Engineer — Qvest Engage GmbH (formerly TeraVolt), Hamburg

December 2021 — Present

Product for one of Germany's largest public television broadcasters

Previous, current and new versions — owned architecture and delivery for 3.5+ years, national-scale audience.

- Launched the new version of the product; architected and delivered release-critical features with direct business impact
- Improved app performance on the slowest use-cases by 50%, driving higher user satisfaction and viewership
- Expanded the supported device base by 4%, rolling out support for 7 additional platforms
- Continuously owned the applications extending the product plus the previous version and its backend-for-frontend aggregation layer

Product for a German TV news channel

- Established code documentation at 100% coverage, cutting future budget and improving development quality
- Ran requirements analysis, selected the technology stack, and identified reusable components across teams
- Took the project from requirements to early development, communicating directly with stakeholders

Two products for a leading German communications group

- Took over project #1 from an early development phase and led it to launch
- Coordinated and mentored a team of 2 engineers
- Delivered key features and resolved critical production issues, working directly with a part-time lead developer and stakeholders
- Led stabilization of a feature-incomplete legacy codebase to release readiness

Software Engineer — snapADDY GmbH, Würzburg

November 2020 — November 2021

- Released and stabilized the "Visit Report" and "BusinessCardScanner" products for production
- Helped grow the user base by 9% through performance improvements
- Contributed to defining a continuous release strategy within German agile workflows

Working Student — iWelt GmbH + Co. KG, Eibelstadt

May 2019 — March 2020

- Developed and maintained WordPress-based websites

JavaScript/Node.js/PHP Developer — Freelance, Kharkiv, Ukraine

September 2015 — September 2017

- Built UI components and internal web applications (dashboards, form-heavy interfaces) with vanilla JS/HTML5/CSS3
- Integrated frontend with a Node.js-based REST API; contributed to a web-based video catalog with search and playback

- Managed small-scale development cycles independently, end to end, working directly with clients

EDUCATION

Bachelor of Science in E-Commerce

Hochschule für angewandte Wissenschaften Würzburg-Schweinfurt · Oct 2017 — Mar 2022

Bachelor of Engineering in Computer Engineering

National Technical University "Kharkiv Polytechnic Institute" · Sep 2015 — Jun 2019 (completed remotely after relocating to Germany)

INTERNSHIP

iWelt GmbH + Co. KG, Eibelstadt

March 2020 — September 2020

Designed and developed plug-ins and themes for the Shopware 6 shop system using Vue.js and Symfony.

LANGUAGES

German — C1

English — B2
